Demonstration procedure

Preserve competing source values with their labels and timestamps. Request relevant evidence, inspect the original, and independently verify extracted fields. Record the review reason and retain rejected alternatives.

A rule designer tests and submits a model. A separate reviewer approves before publication. An administrator or Super Admin cannot bypass the independent-review requirement by approving their own work.

The ten seeded text procedures use the application policy lifecycle. This PDF is an illustrative reference only; downloading or uploading it does not publish policy or make it law. No automatic policy-PDF ingestion is implemented.

CHECKPOINT: guidance needs a controlled review; fictional content is not law.
