Reconciliation evidence

For fictional member Nasser Al Wahaibi (M006), the demonstration source supplies OMR 700.000 proposed, OMR 650.000 approved and an OMR 50.000 adjustment. These labels describe fixture inputs, not an official authorization.

Calculation: 700000 - 650000 - 50000 = 0 baisa. Compare this result with M005, whose supplied adjustment is zero and whose difference remains unexplained.

A CLEAR comparison means the configured arithmetic reconciles. It does not authorize, release or issue a payment. Independently verify the actual approval and adjustment records in production.

CHECKPOINT: the adjustment reconciles the comparison; no payment is issued.
